I WANT TO <perform some="" task=""></perform>
Provide a convenient user friendly platform
Be able to specify ingredients, price, calories, food category (spicy, kids, vegetarian, low fat, etc.) for dishes
generate promo codes
order without making an account
improve the efficiency of my restaurant
provide comprehensive training on the system
Having an easy sytem the user can use to place orders
Real-time order tracking by order number (order status).
It should facilitate order management, reduce errors, and make it easier for our staff to process orders efficiently
gather feedback from customers through reviews and ratings
collect and analyze data over time about customer preferences, order trends, order status, and sales
comprehensive documentation for the system
